

Helsinki, 10 February 2022

Addressees

Registrant(s) of JS_5-ethyl-2-methylpyridine as listed in the last Appendix of this decision

Date of submission of the dossier subject to this decision

02/09/2013

Registered substance subject to this decision ("the Substance")

Substance name: 5-ethyl-2-methylpyridine

EC number: 203-250-0

CAS number: 104-90-5

Decision number: Please refer to the REACH-IT message which delivered this communication (in format CCH-D-XXXXXXXXXX-XX-XX/F)

DECISION ON A COMPLIANCE CHECK

Under Article 41 of Regulation (EC) No 1907/2006 (REACH), you must submit the information listed below, by the deadline of **17 August 2022**.

Requested information must be generated using the Substance unless otherwise specified.

A. Information required from all the Registrants subject to Annex VII of REACH

1. Ready biodegradability (Annex VII, Section 9.2.1.1.; test method: OECD TG 301C/D/F or OECD TG 310)

Reasons for the request(s) are explained in the appendix entitled "Reasons to request information required under Annex VII of REACH".

Information required depends on your tonnage band

You must provide the information listed above for all REACH Annexes applicable to you, and in accordance with Articles 10(a) and 12(1) of REACH:

- the information specified in Annexes VII and VIII to REACH, for registration at [REDACTED].

You are only required to share the costs of information that you must submit to fulfil your information requirements.

How to comply with your information requirements

To comply with your information requirements you must submit the information requested by this decision in an updated registration dossier by the deadline indicated above. You must also update the chemical safety report, where relevant, including any changes to classification and labelling, based on the newly generated information.

You must follow the general testing and reporting requirements provided under the Appendix entitled "Requirements to fulfil when conducting and reporting new tests for REACH purposes". For references used in this decision, please consult the Appendix entitled "List of references".

Appeal

This decision, when adopted under Article 51 of REACH, may be appealed to the Board of Appeal of ECHA within three months of its notification to you. Please refer to <http://echa.europa.eu/regulations/appeals> for further information.

Failure to comply

If you do not comply with the information required by this decision by the deadline indicated above, ECHA will notify the enforcement authorities of your Member State.

Authorised¹ under the authority of Mike Rasenberg, Director of Hazard Assessment

¹ As this is an electronic document, it is not physically signed. This communication has been approved according to ECHA's internal decision-approval process.

Appendix A: Reasons to request information required under Annex VII of REACH**1. Ready biodegradability**

Ready biodegradability is an information requirement in Annex VII to REACH (Section 9.2.1.1.).

You have provided:

- i. a key study performed according to OECD TG 301E (ready biodegradability - modified OECD screening test)
- ii. a supporting study for inherent biodegradability study according to OECD TG 302B (Inherent biodegradability: Zahn-Wellens/EMPA Test)

We have assessed this information and identified the following issues:

- A. To fulfil the information requirement, a study must comply with the OECD TG 301 or 310 (Article 13(3) of REACH).

The supporting study (study ii) was conducted according to OECD TG 302B. Therefore, this study is not a ready biodegradability test but an inherent biodegradability test. Study ii cannot fulfil the information requirement.

- B. Furthermore, studies performed according to OECD TG 301E or OECD TG 302B are not applicable to volatile substances according to the corresponding test guideline.

The vapour pressure reported in your dossier for the Substance is 185.3 Pa at 20°C. Therefore the Substance can be regarded as volatile. There is no information, neither for the key study nor for the supporting study, whether an abiotic control was included to estimate any physical loss.

Therefore, physical loss of the test material from volatilisation cannot be ruled-out. The decrease of DOC measured in the two tests you provided cannot be attributed exclusively to actual biodegradation as volatilisation of the test material may have occurred.

On this basis, the information requirement is not fulfilled.

Study design

The Substance is volatile. Therefore a test guideline applicable to volatile test material must be used to perform the test: OECD TG 301C, 301D, 301F or OECD 310.

In your comments to the initial draft decision you agree to perform the study with the Substance according to the OECD TG 301C, 301D, 301F or OECD 310.

Appendix B: Requirements to fulfil when conducting and reporting new tests for REACH purposes

A. Test methods, GLP requirements and reporting

1. Under Article 13(3) of REACH, all new data generated as a result of this decision must be conducted according to the test methods laid down in a European Commission Regulation or to international test methods recognised by the Commission or ECHA as being appropriate.
2. Under Article 13(4) of REACH, ecotoxicological and toxicological tests and analyses must be carried out according to the GLP principles (Directive 2004/10/EC) or other international standards recognised by the Commission or ECHA.
3. Under Article 10(a)(vi) and (vii) of REACH, all new data generated as a result of this decision must be reported as study summaries, or as robust study summaries, if required under Annex I of REACH. See ECHA Practical Guide on How to report robust study summaries².

B. Test material

1. Selection of the Test material(s)

The Test Material used to generate the new data must be selected taking into account the following:

- the variation in compositions reported by all members of the joint submission,
- the boundary composition(s) of the Substance,
- the impact of each constituent/ impurity on the test results for the endpoint to be assessed. For example, if a constituent/ impurity of the Substance is known to have an impact on (eco)toxicity, the selected Test Material must contain that constituent/ impurity.

2. Information on the Test Material needed in the updated dossier

- You must report the composition of the Test Material selected for each study, under the "Test material information" section, for each respective endpoint study record in IUCLID.
- The reported composition must include all constituents of each Test Material and their concentration values and other parameters relevant for the property to be tested.

This information is needed to assess whether the Test Material is relevant for the Substance and whether it is suitable for use by all members of the joint submission.

Technical instructions on how to report the above is available in the manual on How to prepare registration and PPORD dossiers³.

Appendix C: Procedure

This decision does not prevent ECHA from initiating further compliance checks at a later stage on the registrations present.

ECHA followed the procedure detailed in Articles 50 and 51 of REACH.

The compliance check was initiated on 1 October 2020.

ECHA notified you of the draft decision and invited you to provide comments.

ECHA took into account your comments and did not amend the request(s) and the deadline.

ECHA notified the draft decision to the competent authorities of the Member States for proposals for amendment.

As no amendments were proposed, ECHA adopted the decision under Article 51(3) of REACH.

Appendix D: List of references - ECHA Guidance⁴ and other supporting documentsEvaluation of available information

Guidance on information requirements and chemical safety assessment, Chapter R.4 (version 1.1., December 2011), referred to as ECHA Guidance R.4 where relevant.

QSARs, read-across and grouping
